Executive Summary

Barcelona, the centre of a mega-region with 25 million inhabitants

- Barcelona, capital of Catalonia, has more than 1,600,000 inhabitants and is at the heart of a metropolitan area with almost 5,000,000 inhabitants, representing 63.4% and 10.1% of the total population of Catalonia and Spain, respectively.
- The development of a metropolitan region goes beyond its geographical area to create mega-regions¹ or polycentric agglomerations of cities that are a unit of natural economic influence in any given geographic area. In southern Europe, one that stands out is along the Barcelona –Lyon corridor, encompassing 25 million people with an output of nearly 1 billion Euros of production, ranking number 16 and 11 in the world in terms of population and wealth, respectively.
- In terms of consolidated metropolitan agglomerations, the metropolitan area's population is approximately a quarter of New York's, yet greater than those of Boston, Montreal or Milan.
- Barcelona's cosmopolitan spirit –diverse and intercultural– is shown by the fact that nearly 18% of city residents are foreigners.

Barcelona is a dynamic economic engine of growth, with a diversified structure and international recognition

- Barcelona has maintained its strong position internationally, in addition to boasting a recognized city brand. As such, in 2011 Barcelona was among the **six best European cities for business**, according to the *European Cities Monitor* by Cushman & Wakefield, and it has maintained a position in the top six during the decade 2001-2011. It also holds the top spot as the city with the best quality of life for workers, and is placed **second in terms of best European city to promote itself as a business centre**, and third best-known by European executives. Moreover, according to the report *Hot Spots: Global City Competitiveness Benchmarking* by the Economist Intelligence Unit, the city is the ninth most-attractive in the world, standing out because of its social and cultural character, and its infrastructure (sharing 5th and 9th places with other cities, respectively).
- Barcelona's gross domestic product (GDP) stood at 64,521.3 million Euros in 2008, with a GDP per capita of 39.9 thousand Euros. In terms of the distribution of gross value added by sector, what stands out is the importance of services for businesses and real estate, representing more than a quarter of the total (25.6%), followed by collective services (21.5%), industry (11.2%), commerce and trade and repairs

(10.9%), and transport (9.6%). Furthermore, Barcelona's metropolitan area boasts the highest degree of diversity in terms of production in Spain.

- Barcelona has a significant industrial sector employing 8.8% of all workers, and its metropolitan area accounts for around two thirds of manufacturing jobs in Catalonia (65.9%), which includes strong car production clusters –one of Europe's largest–, pharmaceuticals and chemicals, foodstuffs, electrical materials and equipment, paper and printing, and waste treatment.
- Barcelona encourages and promotes economic activity and areas related to logistics and access to markets in Southern Europe, the Mediterranean, Asia and Latin America.
- After GSMA chose Barcelona for its **Mobile World Capital** for the period 2012-2018, the city has launched a four-pronged project: the Mobile World Congress, Mobile World Hub –focused on the industrial and business areas–, Mobile World Center, and the Mobile World Festival, which has a wider social and civic role. The city is implementing various measures to promote this sector, among them, the promotion of a free trade zone for companies in the Smart City Campus-22@ area for companies with development projects related to these activities, with the final goal being the development of a permanent economic and industrial ecosystem in Barcelona and Catalonia focused on mobile technology that can become an international and national benchmark cluster.
- The city also supports the development of other high value-added sectors such as healthcare and biomedicine, ICT, environmental sectors, energy sectors and research in the food industry, while strengthening traditional and consolidated sectors such as trade, logistics, tourism and social sectors.
- In 2011, Catalonia's GDP was 210,150 million Euros, representing 20% of the Spanish total. Its per capita GDP is 17.2% higher than the European Union's average.

Barcelona's business activities are dynamic and flexible

- Greater Barcelona is home to **453,485 businesses**, in other words, 14% of Spain's total. These are mostly SMEs (98%), with their greater flexibility and adaptability to complex environments.
- In 2011, the rate of entrepreneurial activity (TEA) of the resident population (18-64) in the province of Barcelona stood at 7%, and this marked a turning point for this indicator which showed growth for the first time in five years. Barcelona's TEA is higher than Catalonia's (6.8%) and Spain's (5.8%) and in the European context, higher than countries such as Finland (6.3%), Sweden (5.8%) France and Belgium (5.7% each) and Germany (5.6%), although slightly lower than the EU average (7.6%).

¹ R. FLORIDA (2007), *The Rise of the Megaregion*, Richard Florida, The Martin Prosperity Institute at The Joseph L. Rotman School of Management, University of Toronto.

- In 2011, 6,416 companies were created in Barcelona, representing a rate of 4 per 1,000 inhabitants, which was up by 5.3% compared to 2010. The province of Barcelona saw 8.3 firms created for every one that was wound up, a ratio that places it at the head of major urban areas in Spain in this indicator.
- One of the objectives of the city hall's so-called **Barcelona Growth** project is to generate a business-friendly environment via the creation of a support office for businesses, streamlining the process for setting up businesses, and with the administration paying suppliers within 30 days. It also envisages the creation of a virtual platform called *Barcelona Connecta*, which will promote networking between entrepreneurs, associations and stakeholders, and a platform for facilitating public sector procurement from local SMEs and entrepreneurs, and other instruments that contribute to achieving this goal.

Barcelona has a strong and large labour market with well qualified workers

- The city has almost a million jobs and nearly 2.3 million in the provincial area. Barcelona's activity and employment rates (79.6% and 65.9%, respectively) are higher than the Catalan, Spanish and European averages.
- Barcelona now has one of the largest labour markets in Europe in high added value sectors: Catalonia is the fourth top region in Europe in terms of the number of people employed in high and mid-range technology-intensive manufacturing sectors, and fifth in terms of workers in science and technology, while reaching seventh place in the case of knowledge-intensive and high-end technology services.
- Catalonia has **12 universities and 247,571 students**, and the metropolitan area's 8 public and private universities account for 81.2% of students. These offer a total of 436 official masters courses with 16,944 enrolled students, plus 12,107 doctoral students. Moreover, there were 14,732 foreigners studying at Catalan universities in the 2010-2011 academic year.
- In 2010, the percentage of workers with a university education in Catalonia stood at 36.9%, higher than the European Union (30.7%) and slightly lower than the Spanish average (37.8%).
- Two of the city's business schools, **IESE** and **ESADE**, are ranked 4th and 12th respectively in Europe's top 100 full-time MBA programmes, according to the 2012 ranking by the prestigious Financial Times. Moreover, according to the ranking *Which MBA?*, developed annually by the Economist Intelligence Unit, IESE was in second place in Europe and tenth in the world, while ESADE occupied the fifth spot in Europe and seventeenth in the world in 2011.

Barcelona leads Spain in the development of the knowledge economy

- 28.7% of businesses and 52.9% of city employees work in knowledge-intensive industries.
- The province of Barcelona generates 15% of patent applications and 19.5% of utility models in Spain.
- Catalonia has more innovative companies than any other autonomous region in Spain (21.6%) and 22.5% of national total expenditure on innovative activities.
- The promotion of research in Catalonia in recent years meant that R&D expenditure in 2010 stood at 1.6% of GDP, and the number of workers engaged in research and development reached 46,336.
- Barcelona improved its international ranking in terms of research in 2011 reaching **5th best city in Europe and 12th in the world in terms of scientific production**. In addition, the ratio of projects funded by the European Research Council per million inhabitants in Catalonia in the last four years exceeds that of countries like Austria, Finland and Belgium.
- Three of Barcelona's universities (Pompeu Fabra University (UPF), University of Barcelona (UB) and the Autonomous University of Barcelona (UAB) are among the top 225 in the world, according to the *Times Higher Education University Ranking*, while the UB and UAB are also among the top 200, according to the *QS Top University Ranking 2011/2012*, which makes Barcelona the eleventh best city in the world for college students.
- Creative activities account for more than 10% of workers in Barcelona-based companies, with about 90,000 jobs and 7,800 businesses. Barcelona accounts for 45% of Catalonia's creative businesses and 52% of its jobs in creative sectors. Worth noting is that, according to the latest research, a higher percentage of workers in creative industries is strongly correlated to higher outputs per capita.
- **Catalonia is the driver of medical technology and biomedical research in Spain** with 23% of new biotech firms created in 2010. Moreover, Catalan companies represent 21% of all Spanish firms, turning over more than 15,000 million Euros in 2010, which is 29.4% of all Spanish revenues in this activity. In Catalonia, half of those employed and life sciences work in R&D.
- *The European Tech Cities Index* by Buck Consultants, which measures factors related to technology and know-how, talent, market size, connectivity and international business climate in European cities, places Barcelona in tenth place along with Amsterdam in the 2012 ranking, headed by Paris, London and Oxford.

- Barcelona is aiming to lead the transformation to smarter and sustainable cities by creating a City protocol or world standard for measuring the sustainability and capacity of urban areas to generate quality of life. This initiative has been awarded the *Areté Award for Urban Innovation 2012*, in the framework of the Turin Città Visibili (Italy).

Barcelona offers a wide range of competitive premises for businesses

The so-called Barcelona-Catalonia initiative, led by the Government of Catalonia -via the public company Incasòl-, and Barcelona City Council, aims to promote a joint regional intelligent land development for new economic activity projects across all major sectors of the knowledge economy around powerful knowledge and mobility intensive infrastructure and facilities, with nearly 7 million square meters of surface area and a capacity to generate over 200,000 highly skilled jobs:

- In Barcelona, areas like the Smart City Campus-22@, la Marina del Prat Vermell, Glòries, Barcelona-La Sagrera, Can Batlló, areas around Via Augusta (Pla Empenta) and Rambla de Sants are especially noteworthy.
- In the area around Barcelona, there are projects like Parc de l'Alba, Ripollet Park, Can Sant Joan, Mas Blau and Can Alemany.

Barcelona has an open economy that is connected to the world

- Catalonia is home to more than 5,000 foreign companies, with the main countries of origin being Germany (18.4%), France (15.1%) and the Netherlands (13.4%). On the other hand, Catalonia boasts most companies in Spain from Japan (85.9%), Italy (67.1%), the U.S. (63%), France (61.9%), Austria (56.4 %) and Switzerland (50.1%).
- KMPG's *Global Cities Investment Monitor* shows that from 2007 to 2011 Barcelona was one of **the world's top ten urban areas receiving most foreign investment**. Also, the city ranks third in Europe in terms of receiving most foreign investment projects, according to the *European Attractiveness Survey 2012* by Ernst and Young.
- Exports from the province of Barcelona rose to 42,036.2 million Euros in 2011, the highest ever recorded after growing 10.4% on 2010. The area of Barcelona consolidated its leadership in the ranking of Spanish exports, generating approximately one fifth (19.6%) of all sales overseas.

- On the other hand, exports of high and medium-high tech from Barcelona reached a value of 24,511.9 million Euros in 2011, representing 58.3% of total sales abroad. The province itself generates around a quarter of the Spanish exports and clearly leads the national ranking.
- In 2011 Barcelona Airport stood in ninth place in the ranking of Europe's busiest airports with over 34 million passengers, a city record that meant Barcelona climbed one place in the *Airport Council International's ranking*. The same year, Barcelona Airport recorded the largest inter-annual increase (6.5%) among the major European airports. The first half of 2012 intensified the year-on-year rate with increases in the number of passengers (+20.7%).
- Port activity in 2011 stood at 43.1 million tonnes transported, showing growth of 4.4% and 0.2% in TEUS and tonnes of cargo, respectively and an increase of 11.8% in passengers. As well, the port of Barcelona came 12th among European ports in terms of container traffic rankings.
- Over the coming years, the Port of Barcelona wants to consolidate its position as the main logistics hub in Southern Europe by expanding its infrastructure with a new Hutchison terminal, and new road and rail connections to extend its hinterland. The inclusion of the Mediterranean corridor in the trans-European railway network will provide a direct connection from Mediterranean ports to Europe and thus increase the port of Barcelona's market share in cargo traffic from Asia.
- In 2011 the cost of living in Barcelona got cheaper in relation to other benchmark cities in Europe and the world, and the prices of areas devoted to economic activity followed the same trend.

Barcelona is an international leader in tourism and the organization of trade fairs and conferences

- The city ended 2011 with a positive performance across all tourism indicators, **achieving four new highs**: surpassing the 15.5 million hotel overnights mark, 2.6 million cruise passengers, 7.3 million tourists and 1,900 million Euros tourist expenditure on credit cards.
- In 2011, Barcelona stood in **third position in the world ranking of organizers of exhibitions and congresses** behind Vienna and Paris, and in fourth place regarding European destinations with most overnight hotel stays by international tourism, only beaten by London, Paris and Rome, but with the highest growth on this indicator. Moreover, according to the *MasterCard Index of Global Destination Cities 2012*, Barcelona is among the top 20 cities in the world in terms of number of visitors and spending by international tourists.

- Barcelona remains the top destination amongst Mediterranean cruise ports, with more than 2.6 million passengers. The port of Barcelona is ready for renewed growth given the internationalization of the cruise passenger segment: the city has an airport with direct flights to major cities in North America, a significant fact considering that this nationality represents the majority of cruise passengers which visit the city.

The city is committed to a retail model base on quality, diversity and proximity

- With 16,379 companies and 146,676 employees, commerce is one of the most important areas of the economic structure of Barcelona. Indeed, despite the impact of the recession on activity and levels of employment, this sector accounted for 22.7% of all social security contribution centres and 15.2% of employees in the city at the end of 2011.
- Municipal markets, with a total surface area of over 200,000 m² and generating an economic impact of 1,000 million Euros, are one of the bedrocks of Barcelona's model of retail because of their economic and social impact on the city's neighbourhoods. They represent the largest fresh food market network in Europe.
- The rankings showing the attractiveness of commerce in 2011 regarding the preferences of international distribution companies, published by Jones Lang Lasalle, and international destinations rated by shoppers, according to the *Globe Shoppers Cities Index 2011* by The Economist Intelligence Unit, both place **Barcelona among the top ten most attractive European cities in terms of retail.**

Barcelona, top city in Europe for quality of life for the fourteenth consecutive year

- Barcelona has been voted Europe's top city in terms of **quality of life for workers** for the fourteenth consecutive year, according to *European Cities Monitor*. The quality of life in the city is also implicitly recognized in The Economist's Intelligence Unit's report *Hot Spots: Global City Competitiveness* in which Barcelona was placed fifth and ninth in terms of being a social and cultural capital and in terms of its global appeal respectively, among the 120 most competitive cities in the world.
- The city hopes to lead the transformation towards creating smarter and sustainable cities by creating a global standard or protocol for measuring the sustainability and capacity of urban areas to generate quality of life. The protocol involves a partnership between universities, cities and companies to define the parameters of change in a city based on environmental, cultural, social and economic factors guided by efficiency in the use of resources and excellence in design.
- In the environmental field, Barcelona's compact Mediterranean city model promotes sustainable mobility, which represents 81% of inner city trips by people, and this is emphasized in prestigious rankings like *Scorecard on Prosperity 2011* by the Toronto Board of Trade, which highlighted the moderate time taken to get from home to work. Also, Barcelona came in sixth position among the best European cities in terms of internal transportation, according to the *European Cities Monitor*. The city continues to work on developing electric-powered mobility through the public-private platform **LIVE (Logistics for the Implementation of the Electric Vehicle)** and plan MOVELE, and in 2013 it will host the most important International Symposium on electric-powered technology and mobility for specialists in this sector: the *Electric Vehicle Symposium and Exhibition (EVS27)*.
- Also worth noting is that Barcelona is now a benchmark in Europe in terms of water saving. The consumption of water per capita was 109.5 litres/day in 2011 -23.4 litres less than in 1999- representing a reduction of almost 18%, significantly lower than those recorded in London (166.5 l/person/day), Paris (120 l/person/day), Rome (234 l/person/day 2011), Vancouver (320 l/person/day), Sao Paulo (177.8 l/person/day) or New York (473.8 l/person/day). Also, Barcelona has been chosen to host the "Secretariat of the Global Alliance for Water Operators", (Global Water Operators Partnerships Alliance-GWOPA), a UN-Habitat agency and permanent secretariat of the world body for the management of water policy, for the next five years.
- The cultural and educational offer is wide and of great quality. In 2011, there were 35 international schools in the Barcelona area. In addition, there are 37 public libraries in the city.
